📘 **SENIORCARE / SENIORPLUS**

Full Project Description — From A to Z (Expanded Version)

AI-Powered Senior Assistant, Dispatcher & Family Integration Network

---

1. FOUNDING VISION

Your global mission:

"Make seniors feel safer, more independent, and more supported — without needing a smartphone — while giving families transparency and giving service companies a smart automated pipeline."

The purpose:

- Seniors struggle with **administration**, **appointments**, **technology**, **transport**, **daily tasks**, **loneliness**, and **decision overload**.
- Families are overwhelmed and anxious about their parents.
- Service companies (cleaning, transport, interim agencies, home helpers) want **clients**, but lack efficient lead acquisition.
- Governments want solutions for aging populations.

Your project solves **all three** with one AI-powered system.

---

2. THE ECOSYSTEM

You are building a **three-sided platform**:

SIDE 1 — Seniors

• They call a number and get instant assistance.
• No apps, no internet, no friction.
• Everything can be done by voice.

SIDE 2 — Families

• Family members get notifications.
• They see what their parents requested.
• They can add restrictions, notes, medical info.

SIDE 3 — Service Providers (B2B)

• Cleaning companies
• Transport PMR / transport médical

• Interim companies
• Home helpers
• Grocery delivery
• Restaurant partners
• Minor repair professionals
• Administrative consultants

Providers receive:

- New clients
- Pre-qualified requests
- Automatic filtering by city
- Automatic dispatch
- Easy recurring revenue

---

3. THE CORE EXPERIENCE FOR SENIORS

3.1 Simple Phone Interaction (No App Needed)

Example scenario:

Senior: "J'ai besoin d'un transport demain à 8h pour aller chez le cardiologue."
AI: "Très bien. Je vérifie avec nos partenaires. Vous préférez un transport PMR ou un taxi classique ?"
AI: "Parfait, je vous confirme cela dans quelques minutes."

Behind the scenes:

- Transcription by OpenAI Whisper / MessageBird
- Intent classification (Transport / Admin / Cleaning / Health / Emergency / Social Call)
- Check availability of providers
- Provider receives task
- Family is notified
- Database log is created

Everything happens **automatically**.

3.2 Types of requests seniors can make

Administrative Support

- eBox login help
- Government documents
- Mutuelle
- MyPension
- Renewal of prescriptions (calling doctor)
- Filling simple forms
- Scheduling medical appointments
- Explanation of letters/paperwork

Life Tasks

- Cleaning help
- Grocery delivery
- Meal preparation
- House maintenance
- Transport & appointments
- Picking up medications
- Paying bills
- Social companionship

Health-Related

- Reminders: medication, appointments
- Calling general practitioner
- Checking symptoms (triage rules + safety advice)
- Monitoring chronic conditions (family-approved)

Social Support

- Daily check-in calls
- Preventing loneliness
- Emotional support (motivational tone)

Emergency Layer (Not 112)

- If AI detects danger:
    - Alert family
    - Alert trusted neighbour
    - Alert partner SOS agencies

---

4. FAMILY INTEGRATION — YOUR UNIQUE DIFFERENTIATOR

Families have:

- A dashboard
- Access to all logs
- Notifications of every request
- Control over who provides services
- Ability to restrict spending
- Medical notes (allergies, mobility level, dementia risk)
- “Red flag” alerts (falls, confusion, urgent needs)
- Periodic reports (weekly, monthly)

Why families love it:

- Peace of mind
- Transparency
- Avoids miscommunication
- Prevents exploitation/scams
- Saves time from constant phone calls
- Tracks health decline early

---

5. PROVIDER SIDE (B2B MODEL)

Companies subscribe to receive:

- Qualified leads
- Automated dispatch

- A private dashboard where they can follow every provider in the company and have **statistics**.
- Priority matching
- Easy recurring clients

Provider workflow:

1. Provider receives SMS/WhatsApp/email from SeniorPlus
2. They click “Accept” or “Decline”
3. The system logs response time
4. If they decline, next provider is contacted
5. They complete the service
6. They receive invoice + payment from the senior or family
7. They can see all future jobs in their dashboard

---

6. TECHNOLOGICAL ARCHITECTURE

6.1 Phone System (You used MessageBird + planning Twilio/ or other ideas if the developer has anything different)

Functions:

- Phone number
- IVR
- Speech-to-text
- Call routing
- Transcription
- Recording
- SMS
- WhatsApp

You experiment with:

- Inbound flows not launching
- Draft/published confusion
- Flow builder logs not showing inbound calls

- Transcription IDs not being captured
- HTTPS webhook parsing
- Workspace routing

All these steps are part of the setup.

6.2 AI Layer (OpenAI GPT-5 / Whisper / Realtime)

Tasks:

- Detect intent
- Detect city
- Detect type of service
- Ask follow-up questions
- Validate address by telling the address that the AI did understand.
- Format a standardized request
- Emotional detection (stress, confusion)
- Safety alerts
- Automatic classification of calls

6.3 Automation Layer (Make / Integromat)

Your typical module sequence:

1. **Webhook from MessageBird**
2. Convert audio → text
3. Detect:
    - Intention
    - Service type
    - Date & time
    - City
    - Urgency level
4. Filter providers by city

5. Send tasks using iterator
6. Notify family (SMS / WhatsApp)
7. Log into Airtable
8. Create an invoice entry
9. Summarize call & sentiment
10. Notify you if something abnormal
11. Return answer to MessageBird for AI response

6.4 Airtable (Backend + Database)

Tables:

- Seniors
- Families
- Providers
- Territories
- Calls
- Tasks
- Invoices
- Medical notes
- Administrative backlog
- User logs

Automations:

- When task accepted → notify senior
- When urgent -> notify family
- When bill unpaid → remind provider
- Monthly invoice generation
- Analytics

---

7. BUSINESS MODEL (DETAILED)

7.1 Subscription for Companies — Your First Target

You want companies to pay directly.

Pricing logic (based on your thoughts):

SMALL COMPANIES (Cleaning, small transport)

399–599 €/month

MEDIUM COMPANIES (Transport PMR, interim, home care)

699–999 €/month

LARGE PARTNERS (CPAS, mutuelles, senior residences, hospitals)

1,500–2,500 €/month

Included:

- AI call distribution
- Client requests
- Dashboard access
- Priority in their zones
- Monthly reporting
- AI admin helper

7.2 Family Subscription

- **Basic: 19 €/month**
- **Premium: 49 €/month**
- **VIP: 99 €/month** (weekly calls, dedicated human agent)

7.3 Per-Action Monetisation

You mentioned:

- Commission on each task (5–10%)
- Extra fee for urgent tasks
- Extra for medical appointment scheduling
- Extra for weekend requests

You also want to avoid being “cheap,” so your minimum invoicing must cover:

- MessageBird minutes
- Transcriptions (OpenAI tokens)
- SMS
- Make operations
- Airtable costs

You estimated the minimum price for profitability:
👉 **At least 800–1000 €/month per B2B partner**

---

8. COMPETITIVE ADVANTAGES

1. No App Needed

Most elderly apps fail because seniors don’t download or understand them.

2. AI Voice but Human Tone

Not robotic — warm, empathetic.

3. Real Family Integration Layer

Almost no competitor offers this.

4. Multi-language (FR/NL/EN/AR/ES)

You personally speak all languages — huge advantage in Belgium.

5. Full-Stack Automation

You reduce cost compared to human call centers.

6. Hybrid Human-AI Model

AI handles 80% — you/human handles 20%.
